

## ***Parsa Wireless Communications and Marquis Technologies announce Strategic Alliance***

Parsa Wireless, a leader in IP Discovery and reverse engineering, is announcing a strategic alliance with Marquis Technologies, the company founded by the former leaders of Rockstar.

Through this alliance, Parsa Wireless customers will have access to an expanded technical footprint that includes Parsa's traditional strengths in the areas of Wireless Communications, Computers, Semiconductors, Media and Consumer Electronics, but now also includes the deep knowledge of the Nortel/Rockstar engineering team and its expertise in Software, Data Networks, Operator Networks and all things Telecom, led by former Nortel/Rockstar CTO Gillian McColgan.

Also, the alliance is now offering IP strategic advisory services and patent portfolio management services. This capability is led by John Veschi, former Rockstar CEO, and includes the insight of other ex-Rockstars, including Chad Hilyard (CIPO) and Afzal Dean (VP-Licensing). Prior to Rockstar, this team led the Nortel IP function through the historic \$4.5B bankruptcy sale, and has prior experience running P&L IP Businesses inside large multi-national corporations.

"Our customers trust Parsa Wireless to provide solid reverse engineering and technical analysis," said Kourosh Parsa, CEO of Parsa Wireless. "They have also asked us to help them on the strategic side - help them figure out their options and what steps they should consider once they have a better understanding of their IP. Now, with this alliance with John and the Marquis team, we can provide them this insight along with our traditional services, all under one umbrella. We are very excited to be moving forward with this next step in our corporate evolution."

"This is a win-win," said John Veschi, Marquis CEO. "We have the opportunity to connect our strong technical team with the world-class folks at Parsa Wireless, while simultaneously finding ways to help Parsa's key customers navigate the challenging IP landscape. We are excited to be part of this team."

Key members of the Parsa and Marquis teams will be at IPBC-Asia in Tokyo, and will be available for 1:1 discussions regarding their combined capabilities.
